IAB Architectural Firm Dashboard – Analytical Report

1. Project Overview

This project presents an interactive Power BI dashboard analyzing registered architectural firms under the Institute of Architects Bangladesh (IAB).
The dashboard consolidates firm-level data to provide insights into firm distribution, leadership structure, geographic concentration, ratings, and digital presence over a five-year period.

Tool Used: Microsoft Power BI
Dataset Scope: IAB Registered Architectural Firms
Time Period: 5 Years

2. Key Metrics Summary

- Total Registered Firms: 142
- Total IAB Architects: 16
- Firms Analyzed (5-Year Period): 141

3. Designation & Leadership Analysis

The designation distribution highlights the organizational structure of architectural firms:

- Principal Architect and Managing Director roles dominate
- Limited presence of CEO and Partner-level roles
- Indicates a founder-led and senior-centric industry structure

📌 Insight: Most firms operate with centralized leadership, suggesting limited corporate-style hierarchy.

4. Geographic Distribution

High firm concentration in Dhaka metropolitan areas, especially:

- Gulshan
- Mohakhali
- Tejgaon

❖ Minimal presence outside major urban zones

📌 Insight: The architectural industry is heavily urban-centric, with opportunities for regional expansion.

5. Firm Growth Overview

- Total firms across the observed period remain relatively stable
- No sharp growth or decline observed

📌 Insight: The sector appears mature and stable, rather than rapidly expanding.

6. Rating & Digital Presence Analysis

❖ **Rating Status**

- Rated Firms: 69%
- Unrated Firms: 31%

❖ **Website Availability**

- Website Available: 53.9%
- Website Unavailable: 46.1%

📌 Insight: Nearly half of the firms lack an online presence, which may limit visibility and competitiveness.

7. Firm-Level Details

The dashboard includes a detailed tabular view containing:

- IAB ID
- Company Name
- Establishment Year
- Address
- Rating

This enables firm-wise comparison and filtering for deeper analysis.

6. Key Findings

- Strong dominance of senior leadership roles
- High geographic concentration in Dhaka
- Digital presence gap across firms
- Rating coverage is moderate but not universal

7. Recommendations

- Encourage digital adoption (official websites and portfolios)
- Promote regional firm registration
- Introduce standardized rating and data completeness policies
- Support leadership diversification beyond founder roles

8. Conclusion

This Power BI dashboard effectively transforms raw IAB registration data into actionable insights. The analysis supports data-driven decision-making for industry stakeholders, policymakers, and researchers while demonstrating strong data visualization and analytical skills.
